

NAAN MUDHALVAN ARTS INTERNSHIP PROGRAM 2026

Frontend Web Development using React

Project Submission

STUDENT NAME : M Affrin Fathima

YEAR : 3RD YEAR

COLLEGE CODE : BRUAU

COLLEGE NAME : GOVERNMENT ARTS AND SCIENCE COLLEGE AVINASHI (CO-EDUCATION)

DEPARTMENT : B.Sc (COMPUTER SCIENCE)

SEMESTER : IV SEMESTER

ROLL NO : 2422k1153

NMID : 959576D56AFBD5EB9DA4EA2D0538FB46

DATE : 18/06/2026

TITLE : College Assignment Submission Tracker

GITHUB LINK : <https://github.com/affrinfathima91-svg/Assingment-Submission-Tracker.git>

1. ABSTRACT

The College Assignment Submission Tracker System is a web application designed to help faculty manage and track student assignment submissions easily. It allows adding assignments with details like title, subject, and due date, and updating their status as Submitted, Pending, or Late. The system also provides filtering by subject and a dashboard to show overall submission status. This helps reduce manual work, improves organization, and makes assignment tracking more efficient in colleges.

1. PROBLEM STATEMENT

In many colleges, managing and tracking assignment submissions is done manually, which leads to confusion, missed deadlines, and difficulty in monitoring student performance across multiple subjects. Faculty members find it time-consuming to maintain records of submitted, pending, and late assignments. Therefore, there is a need for a simple digital system to efficiently track, organize, and manage assignment submissions in one place

3.OBJECTIVES

- To develop a system for tracking college assignment submissions.
- To reduce manual work in managing assignment records.
- To update and monitor submission status (Submitted, Pending, Late).
- To filter assignments based on subject easily.
- To provide a dashboard view of overall submission status.
- To improve organization and efficiency in assignment management.

4.PROJECT SCOPE

- The College Assignment Submission Tracker System will be used by faculty and students to manage assignment records in a simple and organized way. It covers adding assignments, updating submission status (Submitted, Pending, Late), and filtering by subject. The system also provides a dashboard for quick overview of all assignments.
- This project focuses on small to medium-level college use, mainly for tracking and managing assignments digitally. It can be further extended in the future to include features like student login, notifications, file uploads, and attendance integration.

5. TECHNOLOGIES USED

- Frontend: React.js, HTML, CSS, JavaScript
- Styling: CSS / Bootstrap (optional)
- Backend (optional): Node.js, Express.js
- Database (optional): Firebase / MongoDB
- Tools: VS Code, GitHub, Chrome Browser

6. APPLICATION FLOW

- User opens the application dashboard.
- Faculty adds a new assignment with title, subject, and due date.
- The assignment is saved and displayed in the list.
- Students' submission status is updated as Submitted, Pending, or Late.
- User can filter assignments based on subject.
- Dashboard shows summary of all assignments and their status.
- Data is continuously updated for easy tracking and management.

7. KEY REACT CONCEPTS USED

- Components: Reusable UI parts like Dashboard, Assignment List, Add Form
- JSX: Writing HTML-like code inside JavaScript
- Props: Passing data between components
- State (useState): Managing assignment data and form inputs
- useEffect: Handling updates and side effects
- Event Handling: Managing user actions like add, edit, delete
- Conditional Rendering: Showing status like Submitted, Pending, Late
- List Rendering (map): Displaying assignment data dynamically

8. CHALLENGES FACED

- Managing and updating assignment status dynamically (Submitted, Pending, Late).
- Handling multiple subjects and filtering data correctly.
- Maintaining proper state flow between components.
- Ensuring data is displayed correctly in the dashboard.
- Designing a simple and user-friendly UI.
- Avoiding errors while updating or deleting assignments.
- Managing form inputs and validations properly.

9. EXPECTED OUTPUT

10.LEARNING OUTCOMES

- .Gained knowledge of building web applications using React.js.
- Understood how to manage data using state and props.
- Learned to create reusable components for better code structure.
- Improved skills in handling forms and user input.
- Learned how to implement filtering and conditional rendering.
- Gained experience in building a functional dashboard UI.
- Understood basic project structure and workflow in frontend development.

11. CONCLUSION

The College Assignment Submission Tracker System provides an efficient way to manage and monitor assignment submissions in colleges. It reduces manual work, improves organization, and helps faculty easily track student progress. The system ensures better clarity of submitted, pending, and late assignments through a simple dashboard. Overall, it is a useful and effective solution for digital assignment management.
